

THE TITLE OR WHATEVER

FULL NAME ONE AND FULL NAME TWO

In memory of ~~Vladimir Zolovskiy~~

(Communicated by ~~Arlene Belfans~~)

ABSTRACT. ~~[does this take an optional argument?] This is an abstract with some words. But no words that are particularly meaningful at all.~~¹But if you just use a straight ² that won't work (ERROR). Well not compile error, but the mark will appear and the footnote contents will ~~---dissappear---~~.

Here is some text and a *yeah*... this is no good, right? I think.

1. A SECTION TITLE¹

Oh so does the footnote actually work?³ It looks like if you give... I don't know what I was originally saying in this sentence, but...⁴ Here, I'll show you:⁵

This is an absolute mess of a document, but here's an equation

²I would guess that this behaves like footnotes in captions?

2020 *Mathematics Subject Classification*. Primary 1586, Secondary 314, 159, 2653, 58579.

Key words and phrases. ~~Something, else, that, we, need.~~

So this is where we say thanks to grant No. 325349M.

L. E. is the corresopnding author.

The first author gratefully acknowlwedgaes the fruitful conversations they had with Jocaib Gewald.

The second author would like to thank the University of California Irvine for it's generous accomodations for research and spaces for exchanging ideas and collaborating productively.

¹section one

²And that's where you're wrong. ~~(If you give the \caption command an empty optional argument—\caption[]—so that the toc figurelist name is empty so that there's no issue with \par in the caption body, then you can put \footnotemark in the caption argument and then put \footnotetext outside of the figure so that it behaves as normal: wild! But if you just use \footnote in the caption argument even with giving it an empty optional argument, it will appear just like a \footnotemark without a \footnotetext.)~~

³Let's see...

⁴This is a footnote that is very closely followed by another footnote.

⁵Here's the other footnote, just as described...

figure stuff

FIGURE 1. A caption for a figure. ~~This can't have a footnote in it, I believe~~²

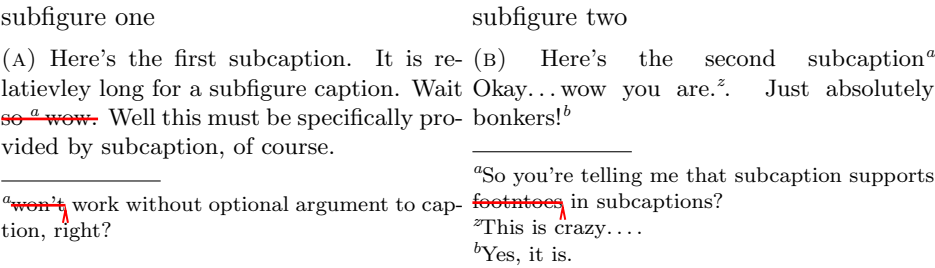

FIGURE 2. Two subfigures

$$X^2 = \prod x \times iy - \frac{\theta \Omega}{\omega \hat{ii} + iz}$$
$$= \sum_{i \in \infty}^{\frac{\eta N}{5}}$$

which is a bit of a palette cleanser, maybe⁶:

By default, you can put almost anything in a footnote, right?⁷ So it seems. Blech.

⁶is it?
⁷This is maybe true—let's see:

$$\prod_{e \in \mathbb{E}}^{\Omega} x^2 - \varphi^3$$

well? Yes, it looks like everything is fine. Other than maybe... an enumerate?

(1) first

(2) second

Yeah... no problem.

- bullet
- list
- of
- stuff

But you can't put a figure in a footnote, right?

stuff	more
And things	you hear?

But you cannot put a float in a footnote. Thank goodness.
You cannot put a verbatim environment either it seems. ~~\controlsequence~~

And finally some text on a new page!
